2. Same dataset will be used. You are going to show the relationship of the model and the manufacturer.

```
library(ggplot2)
```

```
ggplot(mpg, aes(x = manufacturer, y = model)) +  
  geom_point() +  
  theme(axis.text.x = element_text(angle = 45, hjust = 1)) +  
  labs(title = "Relationship between Model and Manufacturer",  
       x = "Manufacturer",  
       y = "Model")
```

2a. What does `ggplot(mpg, aes(model, manufacturer)) + geom_point()` show?

#X-axis (horizontal): Car models.

#Y-axis (vertical): Car manufacturers.

#Points: Each point on the plot represents a specific car model and its corresponding manufacturer in the mpg dataset.

#This plot provides a visual representation of how different car models are distributed across various manufacturers.

2b. For you, is it useful? If not, how could you modify the data to make it more informative?

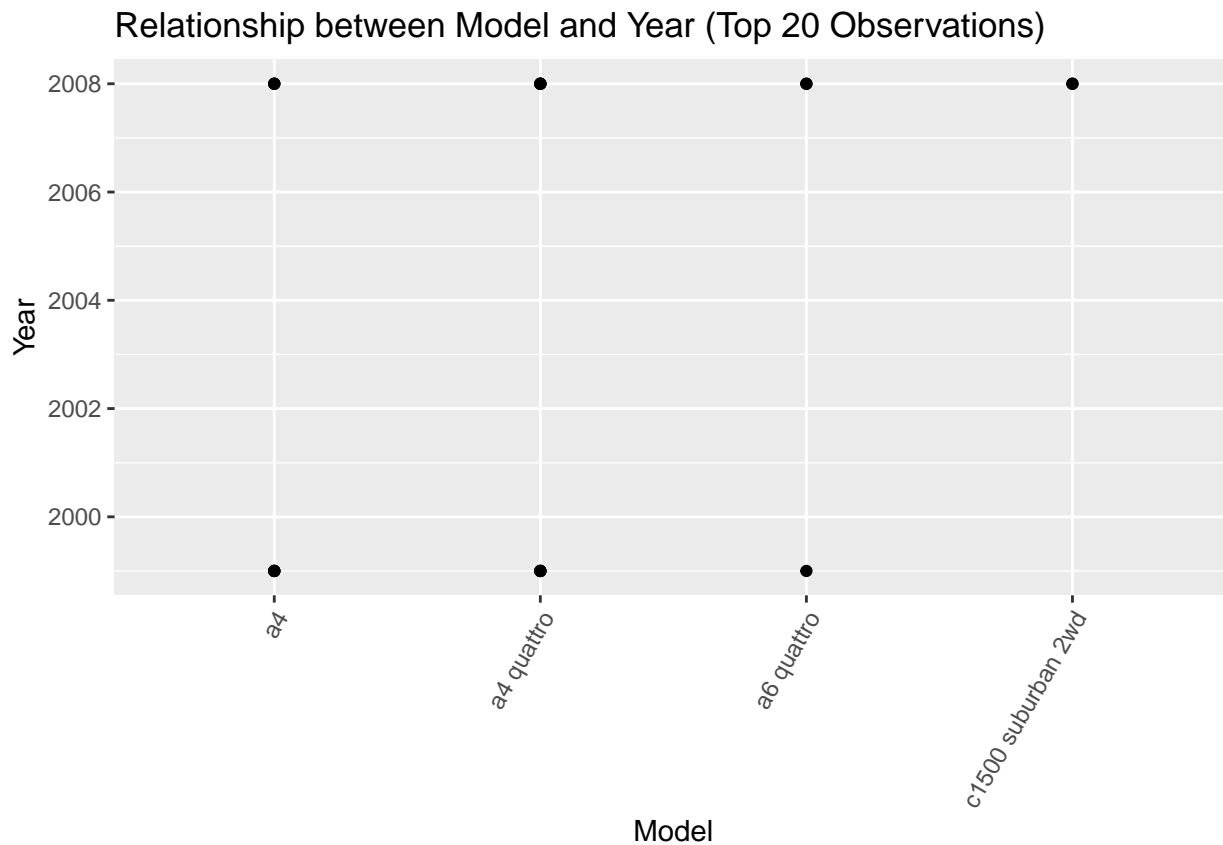

```
ggplot(mpg, aes(x = model, y = manufacturer, color = fl)) +
  geom_point() +
  theme(axis.text.x = element_text(angle = 45, hjust = 1)) +
  labs(title = "Relationship between Model, Manufacturer, and Fuel Type",
       x = "Model",
       y = "Manufacturer")
```

3. Plot the model and the year using ggplot(). Use only the top 20 observations. Write the codes and its results.

```
library(ggplot2)

ggplot(head(mpg, 20), aes(x = model, y = year)) +
  geom_point() +
  theme(axis.text.x = element_text(angle = 60, hjust = 1)) +
  labs(title = "Relationship between Model and Year (Top 20 Observations)",
       x = "Model",
       y = "Year")
```

4a. Plot using `geom_bar()` using the top 20 observations only. The graphs should have a title, labels and colors. Show code and results.

```
top_20 <- head(mpg, 20)
```

```
barplot(table(top_20$model),
  main = "Number of Cars per Model (Top 20 Observations)",
  xlab = "Model",
  ylab = "Number of Cars",
  col = rainbow(length(unique(top_20$model))))
```

```
legend("topright", legend = levels(factor(top_20$model)), fill = rainbow(length(unique(top_20$model))))
```

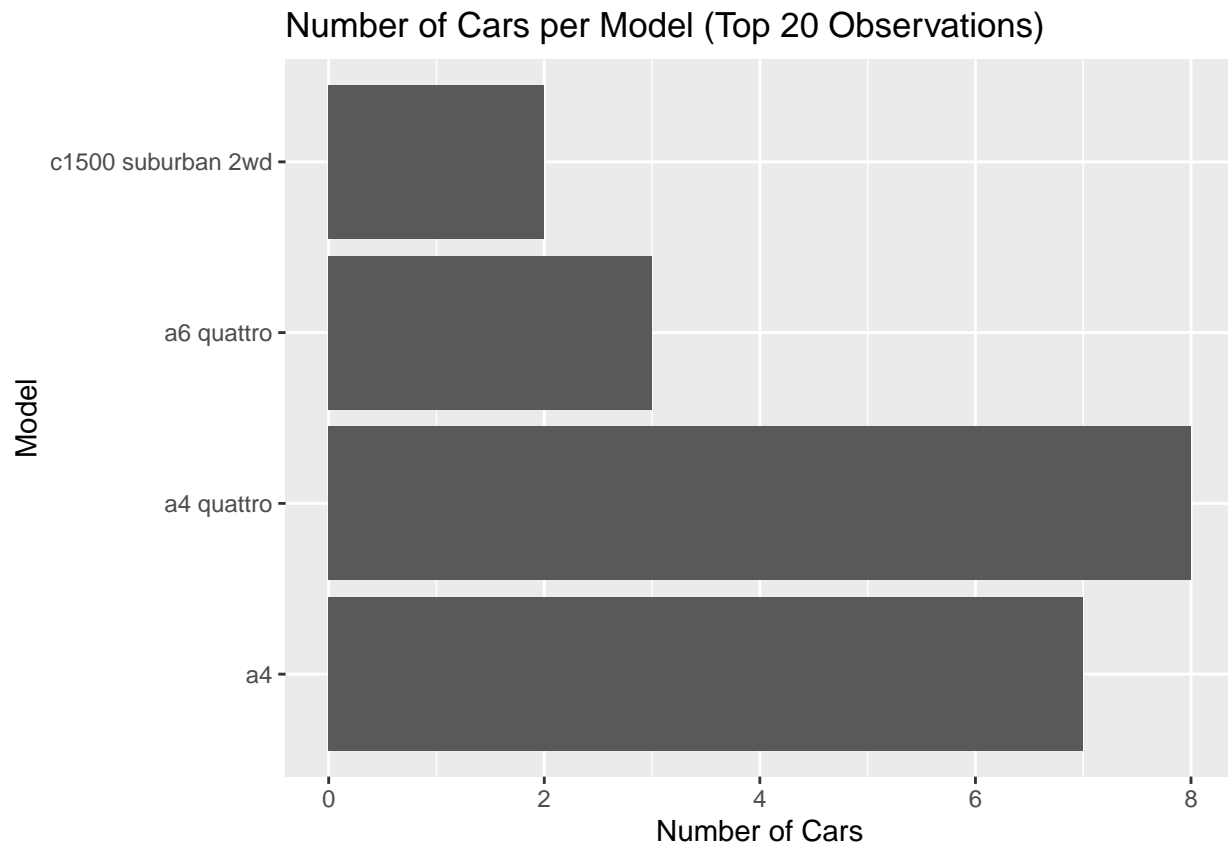

4b.

Plot using the `geom_bar()` + `coord_flip()` just like what is shown below. Show codes and its result.

```
library(ggplot2)
```

```
ggplot(head(mpg, 20), aes(x = model)) +
  geom_bar() +
  coord_flip() +
  labs(title = "Number of Cars per Model (Top 20 Observations)",
    x = "Model",
    y = "Number of Cars")
```

5.

Plot the relationship between cyl - number of cylinders and displ - engine displacement using `geom_point` with aesthetic color = engine displacement. Title should be "Relationship between No. of Cylinders and Engine Displacement".

```
library(ggplot2)

ggplot(mpg, aes(x = cyl, y = displ, color = displ)) +
  geom_point() +
  labs(title = "Relationship between No. of Cylinders and Engine Displacement",
       x = "Number of Cylinders",
       y = "Engine Displacement")
```

5a. How would you describe its relationship? Show the codes and its result

```
summary(mpg[c("cyl", "displ")])
```

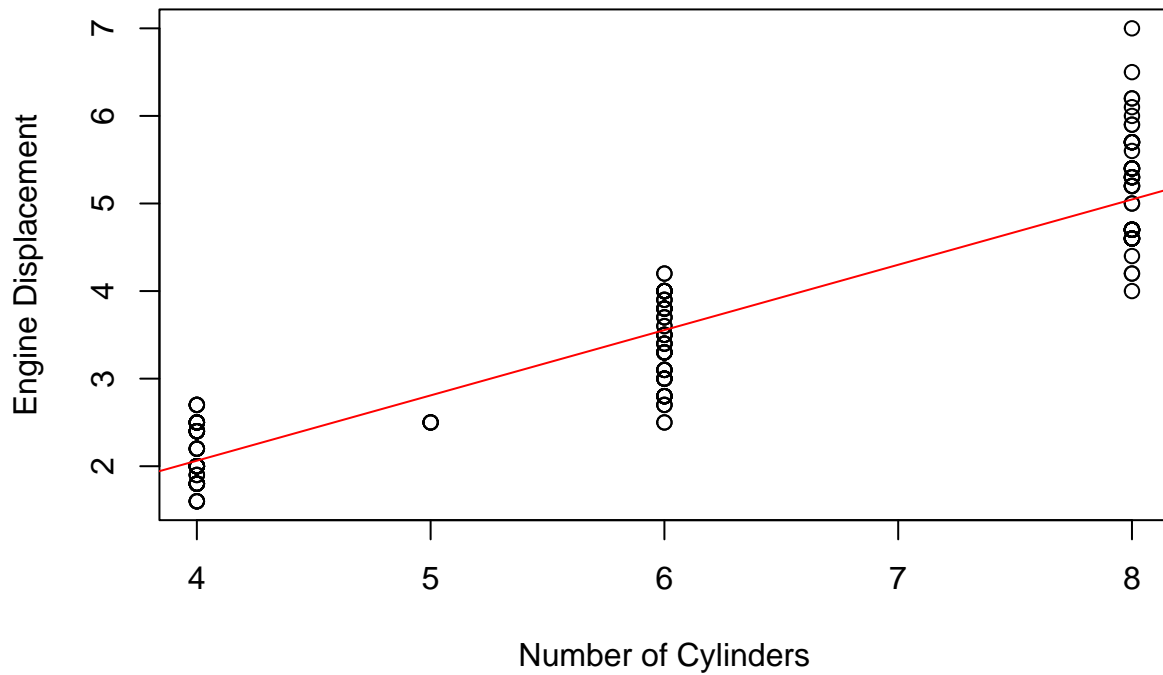

```

     xlab = "Number of Cylinders", ylab = "Engine Displacement")
abline(lm(displ ~ cyl, data = mpg), col = "red")
```

Scatter Plot: Cylinders vs. Engine Displacement

6.

Plot the relationship between displ (engine displacement) and hwy (highway miles per gallon). Mapped it with a continuous variable you have identified in #1-c. What is its result? Why it produced such output?

```
library(ggplot2)
```

```
ggplot(mpg, aes(x = displ, y = hwy, color = cyl)) +  
  geom_point() +  
  labs(title = "Relationship between Engine Displacement and Highway MPG",  
        x = "Engine Displacement",  
        y = "Highway MPG")
```
